

Picasa 3.5 (eng.)

[Back to start Norwegian version of the blog](#)

[Picasa 3.5](#) is here. The most valid update is better tag support. Picasa will now search all your photos and try to recognize faces and add tags to them. There are also synchronized with [Picasa Web Album](#).

Big improvements, but still a major function is not there: Access-control on individual photos. Look at [flickr](#).

Waiting for Picasa 4.0 maybe Google make it right there.
