

14. Option to retry on HTTP 404

Due to strange unstability on Google API, sometimes HTTP 404 is returned, even if the resource is there, and and couple of retries, with work after soem tries.

If use set true on this field, save and restart App, Easy Logger will retry also when a HTTP 404 occurs.

A screenshot of a settings interface. It features a text input field with the word 'true' entered. Above the field is a label that reads 'retry if HTTP 404 occurs (value of 'true' will enable, more details in documentation)'. The interface is flanked by dark vertical bars on the left and right, and a light gray bar is visible at the bottom.

Note. If you put something wrong, i.e a wrong spelled spreadsheet-id, a HTTP 404 will occur, and of course it will never succede, so this is off by default. You choose to retry if you experinces this issue.
